Tutorial 12 a The Earths rotation causes the stars to appear to move in circles around the celestial poles b The stars near the celestial poles appear to move in smaller circles than those further away

Tutorial 13 a The Earths revolution around the Sun causes the Sun to appear to move eastward across the celestial sphere b This apparent movement is called the solar motion

Tutorial 14 a The Earths tilt is responsible for the seasons b During the summer solstice the Sun reaches its highest point in the sky leading to longer days During the winter solstice the Sun is at its lowest point resulting in shorter days

determines its color Tutorial 32 a Refracting telescopes use lenses to focus light b Reflecting telescopes use mirrors to focus light Tutorial 33 a A telescopes light gathering power is directly proportional to the area of its objective lens or mirror 4 b A larger telescope can collect more light enabling the observation of fainter objects Tutorial 34 a A telescopes resolving power is its ability to distinguish between two closely spaced objects b A larger telescope has better resolving power Chapter 4 The Sun This chapter focuses on our Sun exploring its internal structure energy generation processes and its impact on Earth Key Concepts Solar The Suns interior consists of the core radiative zone convective zone photosphere chromosphere and corona Nuclear Fusion The process by which hydrogen nuclei fuse to form helium releasing vast amounts of energy Solar Activity Sunspots solar flares and coronal mass ejections are examples of solar activity Answers to Lecture Tutorials Tutorial 41 a Nuclear fusion occurs in the Suns core b In this process four hydrogen nuclei fuse to form one helium nucleus releasing energy Tutorial 42 a Sunspots are cooler darker areas on the Suns photosphere b They are caused by intense magnetic fields that suppress the flow of energy from the Suns interior Tutorial 43 a Solar flares are sudden bursts of energy that release vast amounts of radiation and particles into space b They can disrupt radio communication and cause power outages on Earth Tutorial 44 a Coronal mass ejections are huge clouds of plasma that erupt from the Suns corona b They can interact with Earths magnetic field causing geomagnetic storms Chapter 5 The Stars This chapter explores the lives of stars from their birth in nebulae to their eventual deaths It covers star classification stellar evolution and the various stages of a stars life 5 Key Concepts HertzsprungRussell Diagram A plot that shows the relationship between a stars temperature luminosity and spectral type Stellar Evolution The process by which stars change over time depending on their mass Stellar Death Depending on their mass stars can end their lives as white dwarfs neutron stars or black holes Answers to Lecture Tutorials Tutorial 51 a Stars are classified based on their temperature and spectral type b The spectral types are O B A F G K and M with O being the hottest and M being the coolest Tutorial 52 a The HertzsprungRussell HR Diagram plots stars luminosity against their temperature b The main sequence is a diagonal band on the HR Diagram that represents stars fusing hydrogen into helium in their cores Tutorial 53 a Massive stars evolve much faster than less massive stars b They have shorter lifespans because they burn through their nuclear fuel much faster Tutorial 54 a Stars like our Sun eventually become white dwarfs b White dwarfs are the dense hot remnants of lowmass stars Chapter 6 Galaxies and the Universe This chapter introduces galaxies vast
